- They are effective for broad content coverage and objective assessment.
- Limitations include difficulty in assessing complex reasoning and potential biases.
- Combining MCQs with other assessment forms, such as clinical simulations, enriches evaluation.
- Future innovations will likely focus on adaptive learning and multimedia integration.

By understanding the strengths and challenges of oncology MCQs, educators and learners can leverage their full potential to advance knowledge, skills, and ultimately, patient outcomes in the dynamic field of oncology.

Question What is the most common type of lung cancer worldwide? Non-small cell lung carcinoma (NSCLC) is the most common type of lung cancer globally. Which biomarker is commonly used to predict response to HER2-targeted therapy in breast cancer? HER2 overexpression or amplification, typically assessed by immunohistochemistry (IHC) or fluorescence in situ hybridization (FISH). What is the primary mechanism of action of immune checkpoint inhibitors in oncology? They block inhibitory pathways like PD-1/PD-L1 or CTLA-4, enhancing the immune system's ability to recognize and attack tumor cells. Which chemotherapy agent is commonly used in the treatment of Hodgkin lymphoma? ABVD regimen, which includes Adriamycin (doxorubicin), Bleomycin, Vinblastine, and Dacarbazine. What is the significance of BRCA1 and BRCA2 mutations in oncology? Mutations in BRCA1/2 genes increase the risk of breast and ovarian cancers and can influence treatment options like PARP inhibitors. Which imaging modality is most commonly used for initial staging of solid tumors? Contrast-enhanced computed tomography (CT)

scans are typically used for initial staging of most solid tumors.
